

App sequence checklist

SM:

Home / Services / Inventory / Manage Elements

-Add CM element and synchronize

Home / Elements / Routing

-Add CM SIP Entity

-Add CM Entity Link

-Add CM Routing Policy

(Dial Patterns are not needed for SIP phones, but may be added towards CM for VM and SIP trunks)

Home / Elements / Session Manager / Application Configuration

-Add Application for CM. CM SIP Entity & CM Element added previously.

-Add Application Sequence with CM App as the only sequence.

Home / Users / User Management / Manage Users

-When adding a SIP user, Origination/Termination Sequence is set to CM App Sequence

CM:

If the SIP user was added correctly, a SIP station should also be added to CM.

Ch station xxxx (sip phone previously created in SM)

-pg6 SIP Trunk: AAR

ch trunk x (x= trunk group created for SM)

-Numbering Format=private

ch route x (x= route pattern added for SM)

-Group No = SIP trunk to SM that matches the SIP entity created in SM; FRL=0; Numbering Format=Lev0-pvt

ch aar analysis 0

-dial string created for sip extension range with route pattern created previously for SM and Call Type=lev0

ch private-numbering 0

-create Ext Code that matches the sip extension range

Items that are usually missed when setting up an Aura SIP phone environment are the last two.
