

Buzz noise audio - KDE

Change your working directory to `/etc/modprobe.d`:

```
cd /etc/modprobe.d
```

And now, create a new file named `audio_disable_powersave.conf` and open with the nano text editor using the given command:

```
sudo nano audio_disable_powersave.conf
```

And put the following lines in that file to turn off the power-saving setting in the sound card permanently:

```
options snd_hda_intel power_save=0
```

fix buzzing sound in linux

For a **USB sound card**, you can use `snd_usb_audio`:

```
options snd_usb_audio power_save=0
```

Now, save changes and exit the Nano text editor by pressing `Ctrl+X` keys. Reboot your system, and you can enjoy a noise-free workspace.
